

Figure 7. Simulated time series of the mean daily number of nymphs of *Ixodes ricinus* per 1,000 m<sup>2</sup> depending on temperature and relative humidity from the ALADIN-Climat model (RCP 8.5 scenario) for the Gardouch site. From top to bottom, the graphs correspond to the periods 1971-1980 (reference period), 2021-2030, and 2071-2080, respectively.
